

AT HOME: SMALL CHANGES, BIG IMPACT

Use Water-Efficient Appliances

Install low-flow showerheads and faucets, and consider water-saving toilets.

Fix Leaks Promptly:

A dripping faucet can waste over 3,000 gallons annually.

Shorten Showers

Cutting your shower time by just two minutes can save up to 10 gallons.

Turn Off the Tap

Don't leave the water running while brushing your teeth or shaving.

Wash Smart:

Run dishwashers and washing machines only with full loads.

For a more sustainable

FUTURE

Water is essential for life, yet it's a limited resource. Conserving water not only helps the environment but also saves money and ensures future generations have access to clean water.

Here are some easy tips to make a difference:

WATER CONSERVATION TIPS

IN YOUR COMMUNITY: SPREAD THE WORD

- **Educate Others:** Share water-saving tips with friends, family, and neighbors.
- **Support Conservation Programs:** Participate in or donate to local initiatives that protect water resources.
- **Report Waste:** Inform authorities about broken pipes, inefficient systems, or excessive water usage.

Everyday Habits

Small changes in behavior can add up to significant water savings over time!

- Educate your household: Teach family members the importance of conserving water.
- Monitor your usage: Install a water meter to track consumption and identify areas to save.
- Collect unused water: Save water that runs while waiting for it to heat up for other uses like watering plants or cleaning.

**Every drop counts!
Together, we can
ensure a sustainable
future for our planet.**

**Let's make
conserving water a
daily habit.**
